

Removable 15mm connector
attaches to the resuscitator
bag or anesthesia circuit

McMurray Enhanced Airway
SH106537
Available in a pack of 10

One Oral Airway Device, Multiple Functions

- World's first distal pharyngeal airway (DPA)
- 2023 Innovation Award winner
- Simplifies insertion — no setup needed; helps mitigate hypoxia quickly
- Small and flexible; fits alongside EGD bite blocks
- Reduces or eliminates need for chin lift and jaw thrust
- Integrated elongated cushioned bite block placed between the molars protects teeth and allows multi-sizing options
- Designed to avoid upper airway obstruction
- When connected to a resuscitation bag or breathing circuit, supports intraoral ventilation during challenging mask ventilation
- Facilitates continuous delivery of oxygen into the distal pharynx during intubation
- First-line basic airway device during deep sedation, pre and post-intubation, or CPR/ BLS/ACLS
- Made in North America

Use the MEA in and out of the OR to enhance ventilation and oxygenation.
