## Patient-Friendly Pedia-Poser for X-Ray Imaging

Designed for optimal imaging and patient comfort, this innovative chair includes a saddle seat with a detachable, form-fitting saddle horn and a bench seat for older children that has a detachable saddle horn for superior positioning. To save time and improve patient experience, the patient only needs to be secured once in the rotating chair that can easily be positioned for different views and places patients as close to the imaging detector as possible to ensure high-quality images.

### Features

- Helps minimize retakes, reducing radiation exposure and saving time and money
- Adjustable back and head-tilt support
- Polyethylene chair components are x-ray lucent for excellent x-ray contrast
- Saddle horn supports a genital lead shield
- Nonporous polyethylene is easy to clean
- Lockable casters
- Views: C-Spine (AP, Lateral, Oblique), Chest (AP, Lateral), Abdominal (AP), Soft Tissue Neck (AP, Lateral)

### Trusted in Practice

Hospitals are already adopting pediatric immobilization chairs like Pedia-Poser to improve imaging quality, reduce repeat exams, and create a better experience for young patients. See how two hospitals in British Columbia, Canada, are improving pediatric imaging.
